Introducing

DrumVision™

Tracerco's new instrument, offering a clear upgrade for detection and monitoring. Powered by unique technology, it delivers reliable, real-time insights that empower operators to maximise production profitability and reduce operational risk.

A new instrument and solution to your aging coke drum challenge

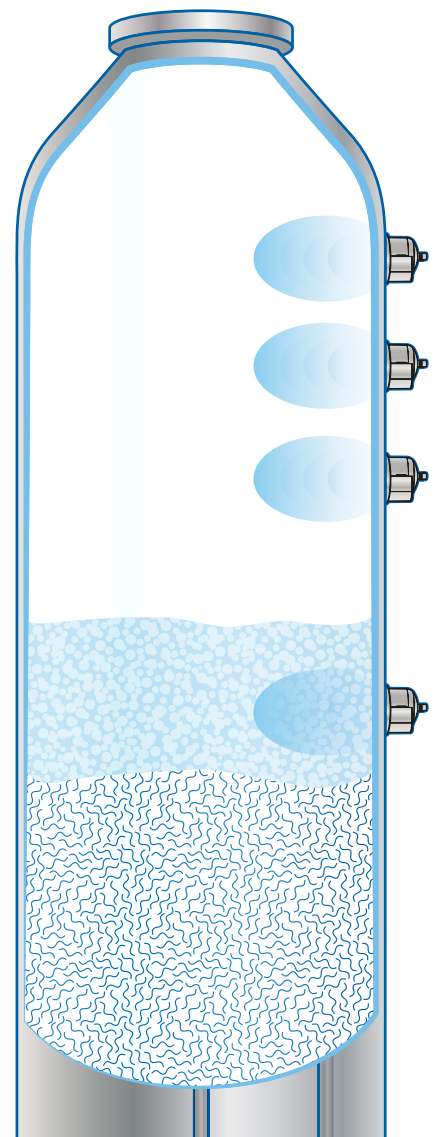

No-one else in the market offers an instrument with our level of insight and detection.

A safe pair of expert hands to keep your production running. Ask Tracerco for DrumVision™.

Insight that drives output

Reduce the gap in your operational risk with an instant, safe and compatible coke drum instrument replacement. A new option with added core competency and expert backing to ensure your production is never compromised.

Trust Tracerco...

Technology for performance optimisation

Maximise process profitability

Optimise yields, reduce waste, and increase throughput with real-time foam and coke detection and three phase visibility.

- By enabling higher heater outlet temperatures and lower drum pressures, the DrumVision™ instrument supports more aggressive, profitable operating conditions.
- Better feedstock blending improves coke quality and product value, while shorter cycle times increase revenue.
- Process efficiency reduces operating costs, delivering measurable bottom-line impact without compromising safety or reliability.

Protect your people and assets

Protect your people, equipment, and operations with unmatched process visibility.

- DrumVision™ is a new instrument that offers real-time foam and phase detection helping avoid foam-overs, costly upsets, and unplanned downtime.
- Better drumswitching timing reduces overfilling risks, while predictive maintenance insights extend run lengths.
- With minimal servicing requirements, you can operate with confidence while reducing exposure risk and operational hazards.

Reduce operating costs

Cut chemical usage, energy waste, and unnecessary downtime.

- Implementing DrumVision™ instrumentation minimises anti-foam chemical consumption, prevents downstream contamination, and improves heater and steam efficiency.
- Retrofit-friendly and easy to deploy, it can replace aging units, reducing transition costs and friction.
- Tracerco manages all aspects of logistics, simplifying compliance and installation.
- With fast production and deployment, you save time and money while maintaining process stability and reliability.

Unique three phase visibility

Our technology is the only solution providing true three phase detection of vapour, foam, and coke.

- Backed by decades of nucleonics expertise, Tracerco delivers a premium solution with fast payback and clear ROI.
- A future-proof investment, replacing obsolete measurement devices with a fully supported, modern solution.
- Globally trusted for radiation measurement, Tracerco is the clear and credible choice for critical process visibility and radiation safety.
